Company Fact Sheet

Company Overview
TrustGo, a Santa Clara-based mobile security company, provides Android users the freedom and confidence to find, download and use the apps they love, wherever they find them. Dedicated to providing the ultimate security platform for Android smartphones and tablets, TrustGo's app offers a comprehensive suite of advanced security and mobile device management (MDM) features to the consumer for free. In addition to protecting users against traditional threats such as malicious app activity, privacy breaches, identity leaks, device loss and theft, TrustGo prevents users from downloading dangerous apps through its Secure App Finder Engine (SAFE). TrustGo was founded by web security veterans in 2011.

Product
TrustGo provides a comprehensive mobile security solution in five key areas:

- **App Security:** TrustGo prevents the download of malicious and risky apps by providing a safe way for users to discover and download trusted apps through its Secure App Finder Engine™ (SAFE). SAFE is powered by its patent-pending reputation system that has screened and rated more than 1.8 million Android apps worldwide. TrustGo also safeguards against today's biggest mobile threats such as malware, spyware and viruses.
- **Mobile Web Security:** Industry-leading protection against browser threats such as malicious sites and phishing schemes.
- **Device Security:** Enterprise-grade mobile device management (MDM) with phone location, remote alarm, lock and wipe and anti-theft picture capture.
- **System Management:** Storage, memory and mobile expense management with run-time tools form.
- **Data Protection:** Cloud-based backup and recovery for mobile data such as call history, contact lists and texts.
